Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Potherical protein K06A9.1a - Caenorhabditis elegans
Species: Caenorhabditis elegans
Species: Caenorhabditis elegans
Species: Caenorhabditis elegans
Species: Caenorhabditis elegans
Accession: T34434
Geisel, C.; Gattung, S.
Inhary, December 1996
Description: The sequence of C. elegans cosmid K06A9.
Reference number: 221525

Accession: T34434
Status: preliminary; translated from GB/EMBL/DDBJ
Molecule type: DNA
Molecule type: DNA
Sesidues: 1-222 <GEI>
Cross-references: EMBL:U80846; PIDN:AAC70890.1; GSPDB:GN00028; CESP:K06A9.1a
Experimental source: strain Bristol N2; clone K06A9
Genetics: Genetics:

Proc. Natl. Acad. Sci. U.S.A. 92:910-914(1995).
-! PUNCHION: Tumor suppressor. Promotes rapid degradation of CTNNB1
and participates in Mrt signaling. APC activity is correlated with its phosphorylation state (By similarity).
-! SUBUNIT: Forms homooligomers. Associates with catenins. Binds axin (By similarity).
-! PTM: Phosphorylated by GSK1B (By similarity).
-! PTM: Phosphorylated by GSK1B (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   <u>OTDMTRRÓLEYBARÓIRAAMEEQLGTCQDMEKRAQRRIARIQQIEKDILRVROLLQSQAA</u>

MAPC gene messenger RNA: novel isoforms that lack exon 7.";
Cancer Res. 53:5589-5591(1993).
-: FUNCTION: Tumor suppressor. Promotes rapid degradation of CTNNB1 and participates in Wnt signaling. APC activity is correlated with its phosphorylation state (By similarity).
-: SUBUNIT: Forms homooligomers. Associates with catenins. Binds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                877 GLQIS--TTAAQIAK---VMEBVSAIHTSQEDRSSGSTTELHCVTDERNALRRSSAAHTH 931
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -----DRIDSVLLTH 89
bridging between microtubules and other skeletal elements.
-!- SUBUNIT: 3 different light chains, LC1, LC2 and LC3, can associate with MAPIA and MAPIB proteins.
-! TISSUE SPECIFICITY: BRAIN, HEART AND MUSCLE.
-!- DEVELOPMENTAL STRAGE: EXPRESSED LATE DURING NEURONAL DEVELOPMENT APPEARING WHEN AXONS AND DENDRITES BEGIN TO SOLIDIFY AND STABILIZE
                                                                                                                                                                                                                                                                                                                                               DOMAIN: THe basic region containing the repeats may be responsible for the binding of MAPIA to microtubules.

From: Various serine residues may be phosphorylated by cAMP kinase. PTM: LC2 IS COEXPRESSED WITH MAPIA. IT IS A POLYPEPTIDE GENERATED FROM MAPIA BY PROTECLYTIC PROCESSING. IT IS FREE TO ASSOCIATE WITH BOTH MAPIA AND MAPIB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ----RNVSSLIATN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isoda-Q62504-2; Sequence-VSP_008564;
Noce-No experimental confirmation available;
Noce-No Experimental confirmation available;
ISSUE SPECIFICITY: Highly expressed in testis. Expressed at lower level in brain, lung, spleen, liver and kidney. Weakly expressed in cardiac and skeletal muscles and ovary. In spleen, it is marginal zone B-cells, while it is weakly expressed in DOMAIN: The RID domain mediates the interaction with nuclear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -1- DOWALN: The SPOC domain, which mediates the interaction with NCOR2, is essential for the repressive activity (By similarity).
-1- SIMILARITY: Belongs to the Spen family.
-1- SIMILARITY: Contains 1 RID (receptor interacting) domain.
-1- SIMILARITY: Contains 4 RNA recognition motif (RRM) domains.
-1- SIMILARITY: Contains 1 SPOC domain.
-1- SIMILARITY: Contains 6 Spoc domain.
-1- CAUTION: Ref. 4 Sequence differs from that shown due to multiple frameshifts and conflicts that create stop codons.
-1- CAUTION: Ref. 5 Sequence differs from that shown due to what seems to be the presence of intronic sequence in the cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PROSITE; PS50102; RRM; 4.

The standard of the sassociated protein IA (MAPLA) gene and its assignment to human chromosome 15.";

MAPLA) gene and its assignment to human chromosome 15.";

U. Neurosci. Res. 40:820-825(1995).

-!- PUNCTION: Structural protein involved in the filamentous cross-bridging between microtubules and other skeletal elements.

-!- SUBUNIT: 3 different light chains, LCI, LC2 and LC3, can associate with MAPLA and MAPLB proteins.

-!- SUBUNIT: 3 different light chains, LCI, LC2 and LC3, can associate with MAPLA and MAPLB proteins.

-!- DOMAIN: THe basic region containing the repeats may be responsible containing of MAPLA to microtubules.

-!- DOMAIN: THe basic region containing the phosphorylated by CAMP kinase.

-!- PTM: LC2 IS COEXPRESSED WITH MAPLA. IT IS A POLYPEPTIDE GENERATED COEXPRESSED WITH MAPLA. IT IS A POLYPEPTIDE GENERATED COEXPRESSED WITH MAPLA. IT IS PREB TO ASSOCIATE WITH BOTH MAPLA AND MAPLB.

-!- DOMAIN: C2 domain 1 is involved in binding calcium and phospholipids. Calcium binds with low affinity but with high specificity and induces a large conformational change.
-!- SIMILARITY: Contains 2 C2 domains.
-!- SIMILARITY: Contains 1 PDZ/DHR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      [3]

-!-TISSUE SPECIFICITY: Plasma membrane of neurons as well as glial cells throughout the brain.
-!- PTM: Phosphorylated at multiple sites by different protein kinases and each phosphorylation event regulates the protein's structure and function (Potential).
-!- SIMILARITY: Contains 23 ANK repeats.
-!- SIMILARITY: Contains 1 death domain.
                                                                                                               regulated

-!- DCMAIN: C2 domain 1 is involved in binding calcium and phospholipids. Calcium binds with low affinity but with high specificity and induces a large conformational change.
-!- SIMILARITY: Contains 2 C2 domains.
-!- SIMILARITY: Contains 1 PDZ/DHR domain.

SUBGNIT: Homo- or heterodimer.
SUBCELLULAR LOCATION: Nuclear matrix (but not in the nucleolus),
reorganization to the Kinetochore/centromere (coronal surface of
the outer plate) and the spindle during mitosis.
DEVELOPMENTAL STAGE: Gradually accumulates during the cell cycle.
PTM: Hyperphosphorylated during mitosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        67 DILERLKE-LNLDSSNFPGVKLRSKMSLRSYGSREGSVSSRSGECSPVPMGSFPRRGFVN

In derease during postnatal development and are low in adults. In derease during ganglia levels remain high throughout development.

INDUCTION: By nerve growth factor.

INDUCTION: By nerve growth factor.

INDUCTION: By a highly basic region with many copies of the sequence KKEE and KKEI/V. repeated but not at fixed intervals, which is responsible for the binding of MAPIB to microtubules.

PTM: LCI is coexpressed with MAPIB. It is a polypeptide generated from MAPIB by proceedytic processing. It is free to associate with both MAPIB and MAPIB. It interacts with the amino-terminal region of MAPIB. (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cortex, spinal cord and sciatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CAUTION: A C-terminal fragment of this protein (residues 1597 to 2459) was originally described as neuraxin in Ref.3.

"Ankyring. A new ankyrin gene with neural-specific isoforms localized at the axonal initial segment and node of Ranvier.";
J. Biol. Chem. 270:2352-2359(1995).
-: FUNCTION: Membrane-cytoskeleton linker. The neural-specific isoforms may participate in the maintenance/targeting of ion channels and cell adhesion molecules at the nodes of Ranvier and

Comment=A number of isoforms are produced;
Name=1; Synonyms=480-kDa isoform;
Isold=012955-1; Sequence=Displayed;
-! TISSUE SPECIFICITY: Expressed in brain and other tissues. Isoform
-! SIMILARITY: Contains 23 ANK repeats.
-! SIMILARITY: Contains 1 death domain.

Detection of somatic and germ-line alterations of human APC gene - used to diagnose, treat and study familial adenomatosus polyposis and sporadic colorectal cancer.

Disclosure; Page 47; 132pp; English.

This sequence is encoded by the APC (Adenomatous Polyposis Coli) generassociated with tumorigenesis, found on chromosome Sq. The sequence may be mutated by deletions insertions, investions, or point mutations of the gene. The APC gene is expressed in most normal tissues as well suggesting that APC is a tumour suppressor. ```
The present sequence is the human adenomatous Polyposis coli (APC) gene product, which was used in the development of a novel method of diagnosing or prognosing an APC gene associated neoplastic tissue. The method comprises comparing APC gene coding sequences or mRNA in a tumour tissue, to APC gene coding sequences or mRNA in a non-neoplastic tissue, tumour tissue. APC is a tumour repressor expressed in most normal tissues. APC mutations are found in familial adenomatous polyposis and sporadic colorectal cancer patients. The method enables mutations to be detected to provide an indication of predisposition to cancer. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MAAASYDQLLKQVEALKWENSNLRQELEDNSNHLTKLSTEASNMKEVLKQLQGSIEDEAM

This invention relates to a novel method to aid in the diagnosis or prognosis of a neoplastic tissue of a human. The method involves detecting somatic alteration of wild-type adenomatous polyposis coli) protein in a tumour tissue isolated from a human (the alteration indicating neoplasia of the tissue). The method of the invention is method is useful in diagnosis or prognosis of a neoplastic tissue of a human. the method is useful in detection of genetic predisposition to cancer. The present sequence represents a protein sequence used in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAQ72297 is a cDNA isolated from the human adenomatous polyposis coli (APC) gene, it encodes the tumour repressors described in AAR63507 and AAR63508. Determination of alterations in APC or its expression products, can be used for the diagnosis and prognosis of cancer e.g. colorectal, lung and breast tumours, and for determining predisposistion to certain
